PROFILE

Full-Stack Developer with **1+ years** of production experience building secure, high-throughput web systems across OTA automation, LMS platforms. Proven ability to architect scalable microservices with **Node.js**, design real-time dashboards with **Next.js** and **WebSockets**, and ship multi-gateway payment systems under tight deadlines.

SKILLS

Languages: C, C++, JavaScript (ES6+), TypeScript, Python (familiar), SQL

Backend & Frameworks: Node.js, Express.js, Nest.js, REST APIs, GraphQL, JWT/OAuth2.0, RBAC

Databases & ORM: MongoDB, Mongoose, MySQL, PostgreSQL, Prisma, Redis

Architecture & DevOps: Microservices Architecture, CI/CD Pipelines, Docker, Cloud Hosting (AWS)

Developer Tools: Git, GitHub, Postman, VSCode, Cursor, ESLint, Jest

EXPERIENCE

Junior Software Engineer (Remote), ScaleBridger 04/2025 – 12/2025 | Austin, TX 78731, USA

- Integrated **Stripe Payment API** (Checkout Sessions, Webhooks, Payment Intent) to handle international booking transactions. Webhook endpoint verifies Stripe signatures before processing, so payment status updates are secure and reliable.
- Built the auth system using **Google OAuth 2.0, JWT with access and refresh token rotation, and bcrypt** for password hashing. Role enforcement runs through custom NestJS Guards, keeping Admin, Manager, and Owner permissions cleanly separated at the route level.
- Built the user-facing property dashboard with **Next.js 14 App Router and TanStack Query**, covering booking history, payment status, and profile management. TanStack Query handles caching and background refetching so the UI stays fresh without manual state juggling.
- Designed the PostgreSQL schema using **Prisma ORM** for Users, Properties, Bookings, and Payments. Foreign key constraints keep relations consistent, and indexes on high-traffic query fields keep reads fast.

Junior Software Engineering Trainee (Onsite), Digital Lab 01/2025 – 03/2025 | Chittagong, Bangladesh

- Worked on full stack features across some web applications using **Next.js, Prisma, and Redis**. Identified slow queries and added caching where repeated reads were hitting the database unnecessarily, bringing down average response times noticeably.
- Identified and fixed 100+ bugs through systematic stress debugging, improving overall application performance and stability by 25%.
- Built an async **SMS Scheduler** to prevent duplicate sends in concurrent environments. Workers were picking up the same jobs and firing the same SMS twice. Solved it with job-level locking so each message processes exactly once, dropping duplication by 90%.

PROJECTS

OTA Automation Platform (trps.com) 📄

- **OTA Property Sync Platform (trps.com)** 📄) A multi-channel property management system handling real-time inventory and booking synchronization across platforms.

Tech Stack: Next.js, PostgreSQL, Redis, AWS, Docker

Safara-LMS (safaralearningcenter.com) 📄, *Freelance Project (Client-based Development)*

- **Learning Management System (LMS)** *Cost-efficient e-learning platform with external video delivery* NestJS, PostgreSQL, YouTube API, JWT, SSLCommerz, Redis, Nginx, AWS

Employee Management System

- **Human Resource Management System (HRMS)** *Dual-role (Admin + Employee) workforce management platform* MongoDB, Express.js, React, Node.js, WebSocket, JWT, TanStack Query

Live Link 📄 | Client Code 📄 | Server Code 📄

EDUCATION

Bachelor of Computer Science and Engineering,

International Islamic University Chittagong

2020 – 2025 | Chittagong, Bangladesh
